

BANKS BOT V3.1

ME IN YOUR EAR

A beginner-friendly guide to reading control, levels, trend, setups, and momentum

THE PURPOSE: BANKS Bot does not predict the next candle. It translates what the chart is confirming now so you can stop second-guessing, stop chasing, and make cleaner decisions.

CONTROL > LEVEL > TREND > SETUP > MOMENTUM

Read the dashboard from top to bottom. Never trade from one row alone.

Prepared for BANKS Bot members

The five questions BANKS Bot answers

The dashboard is a decision checklist. Each row answers a different question. Direction and strength are intentionally separated.

ROW	WHAT YOU MAY SEE	WHAT IT MEANS
8/21 CONTROL	CROSS UP, BUYERS, CROSS DOWN, SELLERS, RANGING	Which side currently controls the 8/21 structure on the selected chart timeframe?
KEY LEVEL	PWH/PWL, PDH/PDL, PMH/PML, ORB H/L, C1-C4	What nearby enabled level matters, and is price above, below, reclaimed, or lost?
TREND	TRENDING BULL, TRENDING BEAR, RANGING	Is price moving directionally or chopping?
ACTIVE SETUP	WAIT RETEST, RETEST BULL/BEAR, HELD BULL/BEAR, NO ACTIVE SETUP	Is a fresh break-and-retest or structure setup actually present?
MOMENTUM	STRONG, GOOD, WEAK, SIDEWAYS	How much sustained follow-through does the current move have?

NON-NEGOTIABLE: Read all five rows together. A green key level does not override RANGING. A bearish trend does not automatically mean chase a short. Momentum tells you whether the move is actually pushing.

The BANKS sequence

1 CONTROL

Who is in control right now - buyers, sellers, or neither?

2 LEVEL

Where is price relative to the nearest enabled major level?

3 TREND

Is the market trending bull, trending bear, or ranging?

4 SETUP

Did the break/reclaim/loss occur, and has the retest held?

5 MOMENTUM

Is the move strong enough to confirm follow-through, or is it weak/sideways?

The most important lesson: direction is not strength

COLOR TELLS DIRECTION. MOMENTUM TELLS QUALITY. A dashboard can be mostly red while momentum is WEAK. That means sellers have the structural advantage, but the downside is not pushing cleanly yet. The same applies to a green dashboard with WEAK momentum.

DASHBOARD COMBINATION	HOW TO READ IT
ALL RED + WEAK	Bearish control is present, but follow-through is limited. Do not chase an extended red candle. Wait for the retest, rejection, or momentum improvement.
ALL GREEN + WEAK	A bullish reversal or reclaim may be developing, but buyers have not proven sustained follow-through. Treat it as an attempt, not a guaranteed reversal.
BEAR + GOOD/STRONG	Sellers have control and downside candles are expanding. This is stronger bearish confirmation, not permission to ignore risk or enter late.
BULL + GOOD/STRONG	Buyers have control and upside candles are expanding. Favor clean retests and defined invalidation over chasing.
RANGING + SIDEWAYS	No side has a clean edge. Preserve capital and wait for confirmation outside the range.

What WEAK does not mean

- **WEAK** does not automatically mean the trend is wrong.
- **WEAK** does not automatically mean the opposite side is now in control.
- **WEAK** means the current directional push lacks enough sustained evidence to be labeled GOOD or STRONG.
- **One large candle** alone may not instantly upgrade momentum. BANKS Bot looks for follow-through, not a single emotional candle.

IN YOUR EAR: The trend can be bearish and still be a bad place to chase. The trend can flip bullish and still be a weak reversal. Let momentum grade the quality.

Three simple playbooks

Bullish continuation

1 BUYERS OR CROSS UP

The 8/21 control row confirms buyers.

2 LEVEL RECLAIMED OR ABOVE

Price regains or holds an important enabled level.

3 TRENDING BULL

Price is expanding rather than chopping through the EMA band.

4 WAIT FOR THE RETEST

Prefer a fresh RETEST BULL or HELD BULL over a late chase.

5 GRADE MOMENTUM

GOOD or STRONG improves confirmation. WEAK says the idea may be developing but follow-through is not proven.

Bearish continuation

1 SELLERS OR CROSS DOWN

The 8/21 control row confirms sellers.

2 LEVEL LOST OR BELOW

Price loses or rejects an important enabled level.

3 TRENDING BEAR

Price is expanding lower rather than chopping through the EMA band.

4 WAIT FOR THE RETEST

Prefer a fresh RETEST BEAR or HELD BEAR over a late chase.

5 GRADE MOMENTUM

GOOD or STRONG confirms better follow-through. WEAK says sellers control the structure but the push may stall or bounce.

Range protection

RANGING + SIDEWAYS: No active setup. Stop forcing a directional opinion. Wait for closed-candle confirmation outside the EMA band and a fresh level/retest sequence.

Case study: the bearish shift appears

Stage 1 - Sellers take control, but the follow-through is still weak.

Stage 1: Cross down, PDH lost, bearish trend, ORB high held as resistance, momentum still weak.

WHAT THE BOT SAW	CROSS DOWN PDH LOST TRENDING BEAR ORB H HELD BEAR WEAK
WHAT IT MEANT	The structure has flipped bearish and the ORB high is acting as resistance. However, sellers have not produced sustained follow-through yet.
WHAT THE TRADER DOES	Do not chase simply because the dashboard is red. Keep a bearish bias, but wait for cleaner rejection, retest confirmation, or stronger momentum.

BANKS IN YOUR EAR: Do not chase simply because the dashboard is red. Keep a bearish bias, but wait for cleaner rejection, retest confirmation, or stronger momentum.

Case study: the market compresses

Stage 2 - A green level appears, but the full dashboard says there is no trade.

Stage 2: ORB high reclaimed while control, trend, and momentum remain ranging/sideways.

WHAT THE BOT SAW	RANGING ORB H RECLAIMED RANGING NO ACTIVE SETUP SIDEWAYS
WHAT IT MEANT	Price reclaimed one level, but there is no directional edge and no active retest setup. The green key-level row does not override the gray range conditions.
WHAT THE TRADER DOES	Wait. This is exactly where beginners invent a trade because one row looks bullish. BANKS Bot is telling you the evidence is incomplete.

BANKS IN YOUR EAR: Wait. This is exactly where beginners invent a trade because one row looks bullish. BANKS Bot is telling you the evidence is incomplete.

Case study: the bullish reversal attempt

Stage 3 - Buyers appear to regain control, but BANKS Bot warns that the reversal is weak.

Stage 3: Buyers, PDH reclaimed, bullish trend, ORB high held bull - but momentum remains weak.

WHAT THE BOT SAW	BUYERS PDH RECLAIMED TRENDING BULL ORB H HELD BULL WEAK
WHAT IT MEANT	The chart has enough confirmed evidence to call the immediate structure bullish. It does not have enough sustained expansion to call the move strong.
WHAT THE TRADER DOES	Recognize the reversal attempt without treating it as guaranteed. Avoid chasing. If already bearish, respect that control changed; if considering a long, demand better follow-through and defined risk.

BANKS IN YOUR EAR: Recognize the reversal attempt without treating it as guaranteed. Avoid chasing. If already bearish, respect that control changed; if considering a long, demand better follow-through and defined risk.

THIS IS THE PRODUCT: BANKS Bot can say, "Yes, buyers have taken control" and, at the same time, "No, the reversal is not strong yet." That is the distinction beginners usually miss.

Case study: sellers regain control

Stage 4 - The weak bullish attempt fails and the bearish structure returns.

Stage 4: Cross down returns, trend flips bearish, ORB high holds bear, momentum is still weak.

WHAT THE BOT SAW	CROSS DOWN PML ABOVE TRENDING BEAR ORB H HELD BEAR WEAK
WHAT IT MEANT	Sellers have regained structural control. The reversal attempt did not create strong bullish follow-through. Momentum has not yet upgraded, so the sell is developing rather than fully confirmed.
WHAT THE TRADER DOES	Favor the bearish side, but still avoid a late emotional entry. Watch for downside continuation and momentum improvement.

BANKS IN YOUR EAR: Favor the bearish side, but still avoid a late emotional entry. Watch for downside continuation and momentum improvement.

Case study: the sell confirms

Stage 5 - Downside expansion arrives and momentum upgrades from WEAK to GOOD.

Stage 5: Cross down, bearish trend, ORB high held bear, and momentum upgrades to GOOD during the selloff.

WHAT THE BOT SAW	CROSS DOWN PML ABOVE TRENDING BEAR ORB H HELD BEAR GOOD
WHAT IT MEANT	The bearish structure now has sustained downside follow-through. Momentum has upgraded because the move is actually expanding, not merely because the dashboard is red.
WHAT THE TRADER DOES	This is stronger confirmation. It still is not permission to chase an extended candle. Use the level, retest, and your invalidation to decide whether the reward-to-risk is still acceptable.

BANKS IN YOUR EAR: This is stronger confirmation. It still is not permission to chase an extended candle. Use the level, retest, and your invalidation to decide whether the reward-to-risk is still acceptable.

THE FULL LESSON: The bot did not predict the selloff. It kept translating the evidence: bearish shift, range, weak bullish attempt, sellers regain control, then momentum confirms the sell.

How to read Active Setup

This row is your timing assistant. Control and trend tell you the side. Active Setup tells you whether a fresh break-and-retest opportunity is present.

ACTIVE SETUP TEXT	PLAIN-ENGLISH MEANING
[LEVEL] WAIT RETEST	A level was broken, reclaimed, or lost. The bot is waiting for price to return to that level. Do not treat WAIT as an entry.
[LEVEL] RETEST BULL	Price returned to the level and confirmed a bullish hold/reclaim on a closed candle.
[LEVEL] RETEST BEAR	Price returned to the level and confirmed a bearish rejection/loss on a closed candle.
[LEVEL] HELD BULL	A recently confirmed level is still holding as support in bullish context.
[LEVEL] HELD BEAR	A recently confirmed level is still holding as resistance in bearish context.
8/21 OR STRUCTURE RETEST	The bot detected a fresh EMA or market-structure retest aligned with the current direction.
NO ACTIVE SETUP	There is no fresh eligible retest/structure event. This is permission to wait, not a reason to invent an entry.

Never confuse confirmation with execution

- The bot identifies conditions. You still choose entry, stop, size, and whether the reward-to-risk is acceptable.
- A confirmed setup can still fail. Define invalidation before entering.
- If the move is already extended from the level, the clean setup may have passed. Do not turn confirmation into a chase.
- When the dashboard conflicts, reduce conviction. When it says RANGING, wait.

Educational use and risk

BANKS Bot is educational chart-analysis software. It does not provide individualized financial, investment, legal, or tax advice. It does not know your account size, risk tolerance, position size, or financial circumstances. No indicator can guarantee an entry, exit, profit, or protection from loss. Historical examples do not guarantee future results. Always define risk before entry and use your own judgment.

Levels, ORB, and setup

Automatic levels

LABEL	LEVEL
PWH / PWL	Previous week high / previous week low
PDH / PDL	Previous day high / previous day low
PMH / PML	Premarket high / premarket low
ORB H / ORB L	Opening range high / opening range low after the selected range is complete
C1-C4	Your optional custom levels entered in settings

Key Level statuses

STATUS	MEANING
ABOVE / BELOW	Current price is on that side of the nearest enabled level.
RECLAIMED	Price crossed back above the level on a confirmed candle.
LOST	Price crossed below the level on a confirmed candle.

ORB RULE: Choose 15M or 30M in settings. BANKS Bot does not treat the ORB high/low as complete until that opening range has finished.

Recommended setup

- The 8/21 Control row follows the selected chart timeframe. This guide uses the 5-minute chart as the recommended intraday starting point.
- Choose either the 15-minute or 30-minute ORB.
- Turn on only the levels you actually use so the Key Level row stays relevant.
- Enter up to four custom levels when you have planned prices that matter.
- Save the indicator settings to your TradingView layout after setup.

The one-page BANKS checklist

BEFORE EVERY TRADE: Read the dashboard top to bottom. If you cannot explain every row in one sentence, you do not have a clear setup yet.

QUESTION	READ
1 WHO HAS CONTROL?	CROSS UP/BUYERS, CROSS DOWN/SELLERS, or RANGING?
2 WHAT LEVEL MATTERS?	Is the nearest enabled level above, below, reclaimed, or lost?
3 TREND OR RANGE?	Only treat a move as directional when the bot confirms a trend.
4 IS THERE A SETUP?	WAIT RETEST means wait. RETEST/HELD means confirmed. NO ACTIVE SETUP means do not invent one.
5 HOW STRONG IS IT?	STRONG/GOOD confirms better follow-through. WEAK calls for caution. SIDEWAYS means no push.

Simple decision rules

CONDITION	DEFAULT RESPONSE
RANGING + SIDEWAYS	WAIT
DIRECTIONAL + WAIT RETEST	PREPARE, DO NOT CHASE
RETEST/HELD + WEAK	VALID IDEA, LOWER CONFIDENCE
RETEST/HELD + GOOD/STRONG	BETTER CONFIRMATION - STILL MANAGE RISK
MIXED ROWS	REDUCE CONVICTION OR WAIT

FINAL RULE: BANKS Bot is not here to make every trade. It is here to keep you from forcing bad ones, chasing late ones, and misreading weak moves as strong trends.
