

MEMBER QUICK START GUIDE

BANKS Scanner V1.0

Find the chart worth opening. Then let BANKS Bot help you read it.

DEFAULT 5M scan	UNIVERSE MAG 7 or Custom 7
ORB 15M or 30M	DISPLAY Top 1 through Top 7

THE PURPOSE: The Scanner reduces chart-hopping. It ranks seven symbols through the BANKS framework so you can open the best current candidate first. It does not place a trade or replace your risk plan.

The screenshot shows the BANKS Scanner V1.0 interface. It features a dark theme with a table of stock symbols and their analysis results. The table is titled 'BANKS SCANNER V1.0 | CUSTOM 7 | 5M | TOP 7 | 30M ORB'. The columns are: SYMBOL, 5M 8/21, KEY LEVEL, ORB, RETEST, MOMENTUM, and STATUS. The table lists seven symbols: TSLA, NVDA, AMZN, META, GOOGL, MSFT, and NOW. Each row contains analysis results for these symbols, with colors indicating the status (e.g., green for 'BULL', red for 'BEAR', orange for 'WEAK'). A 'USD' button is visible in the top right corner.

BANKS SCANNER V1.0 CUSTOM 7 5M TOP 7 30M ORB						
SYMBOL	5M 8/21	KEY LEVEL	ORB	RETEST	MOMENTUM	STATUS
TSLA	BULL	PDH ABOVE	BELOW	8 BULL	STRONG	READY
NVDA	CROSS UP	PML ABOVE	INSIDE	8 BULL	WEAK	BUILDING
AMZN	BUYERS	ORB L BELOW	BELOW	WAIT	WEAK	NO SETUP
META	RANGE	PML BELOW	BELOW	21 BEAR	SIDeways	NO SETUP
GOOGL	RANGE	PML BELOW	BELOW	21 BEAR	SIDeways	NO SETUP
MSFT	RANGE	PML ABOVE	INSIDE	21 BEAR	SIDeways	NO SETUP
NOW	RANGE	PWH BELOW	INSIDE	8 BULL	SIDeways	NO SETUP

The Scanner evaluates all seven symbols, ranks the best current alignment first, and can display only the top row if you want a cleaner view.

SCANNER FINDS > BOT CONFIRMS > YOU DECIDE

What the Scanner does

One job: tell you which chart deserves attention now.

IN PLAIN ENGLISH: You should not have to flip through seven charts and rebuild the same checklist in your head. BANKS Scanner organizes the evidence before you open the chart.

What it evaluates

- 8/21 control on the selected scan timeframe.
- The nearest automatic BANKS level: PWH/PWL, PDH/PDL, PMH/PML, or a completed ORB high/low.
- Whether price is above, below, or inside the selected opening range.
- A fresh 8 or 21 EMA retest aligned with the trend.
- Momentum quality: STRONG, GOOD, WEAK, or SIDEWAYS.
- A final triage status: READY, BUILDING, or NO SETUP.

What it does not do

- It does not scan the entire stock market. It scans MAG 7 or your seven custom symbols.
- It does not predict the next candle or promise a winning trade.
- It does not choose an entry, stop, target, option contract, or position size.
- It does not replace opening the chart and checking the BANKS Bot dashboard.

THE PRODUCT PROMISE: Less guessing. Less chart-hopping. A repeatable way to decide what deserves your attention - and what does not.

Set it up in under three minutes

The Scan Timeframe and ORB length are independent settings.

1. **Add BANKS Scanner to TradingView** - Keep it on the same layout as BANKS Bot so discovery and confirmation stay together.
2. **Choose the Universe** - MAG 7 loads AAPL, MSFT, NVDA, AMZN, GOOGL, META, and TSLA. CUSTOM 7 uses your seven ticker fields.
3. **Choose the Scan Timeframe** - Start with 5M. Select 15M only when you want the scanner to judge 15-minute structure.
4. **Match the chart timeframe** - If the Scanner says 5M, keep the TradingView chart on 5 minutes. If it says 15M, use a 15-minute chart.
5. **Choose the Opening Range** - Select 15M or 30M. A 5M scan can be used with a 30M ORB; these settings do not need to match.
6. **Choose Rows To Show** - Use 1 for only the highest-ranked candidate or up to 7 for the full board. The script still scans all seven.
7. **Optional: enable READY alerts** - Turn on Enable New READY Alerts before creating the TradingView alert.

SETTING	RECOMMENDED START	WHY
Universe	MAG 7	Fast, familiar starting list.
Scan Timeframe	5M	Best fit for the intraday BANKS workflow.
Opening Range	30M	Keeps the opening range separate from the 5M chart read.
Rows To Show	7 while learning	Lets you compare READY, BUILDING, and NO SETUP.

COMMON SETUP MISTAKE: Changing Custom 1-7 will not change the table while Universe is set to MAG 7. Switch Universe to CUSTOM 7 first.

Read the columns left to right

Each column answers one part of the BANKS process.

COLUMN	WHAT YOU MAY SEE	WHAT IT MEANS
SYMBOL	AAPL, TSLA, etc.	The chart to open.
5M/15M 8/21	CROSS UP, BUYERS, BULL, CROSS DOWN, SELLERS, BEAR, RANGE	Who controls the selected-timeframe 8/21 structure.
KEY LEVEL	PDH ABOVE, PML BELOW, ORB H ABOVE	Price relative to the nearest automatic BANKS level.
ORB	ABOVE, BELOW, INSIDE, BUILDING	Price relative to the selected 15M or 30M opening range.
RETEST	8 BULL, 21 BULL, 8 BEAR, 21 BEAR, WAIT	Whether a fresh EMA retest supports the current direction.
MOMENTUM	STRONG, GOOD, WEAK, SIDEWAYS	The quality of current follow-through.
STATUS	READY, BUILDING, NO SETUP	The final scan priority.

IMPORTANT: KEY LEVEL and ORB provide context and help ranking. They do not hard-block READY by themselves. READY is built from confirmed trend, an aligned 8/21 retest, and aligned GOOD or STRONG momentum.

The three statuses

STATUS	PLAIN-ENGLISH READ	YOUR NEXT ACTION
READY	Trend, retest, and momentum are aligned.	Open the chart. Confirm with BANKS Bot. Do not auto-enter.
BUILDING	A trend is confirmed, but the retest or momentum is still developing.	Watch it. Let the setup finish instead of guessing.
NO SETUP	There is no confirmed directional structure.	Move on or wait. Do not force a trade.

The scanner-to-bot workflow

The Scanner narrows the list. The Bot reads the selected chart.

1. **Start with the ranked list** - Look at READY first. If no symbol is READY, review BUILDING only if you want to prepare for a possible setup.
2. **Open the candidate chart** - Do not trade from the scanner row. Put the symbol on the matching 5M or 15M chart.
3. **Read BANKS Bot top to bottom** - CONTROL > LEVEL > TREND > SETUP > MOMENTUM.
4. **Check for conflict** - A READY row can change as new candles close. If the Bot now says RANGING, NO ACTIVE SETUP, or WEAK momentum, slow down and reassess.
5. **Define the trade yourself** - Choose the entry, invalidation, position size, and reward-to-risk. If you are late, let it go.

BANKS IN YOUR EAR: The scanner says, 'Look here first.' The bot says, 'This is what the chart is confirming.' You still decide whether the trade fits your plan.

Simple decision rules

SCANNER	BOT	DEFAULT RESPONSE
READY	Aligned and GOOD/STRONG	Review for a planned trade. Still avoid chasing.
READY	WEAK or no fresh setup now	Pause. The live chart has changed or follow-through is limited.
BUILDING	Trend confirmed, setup developing	Prepare levels and wait for confirmation.
NO SETUP	RANGING/SIDEWAYS	Skip the symbol for now.

One case study says it all

The board separates what is ready from what only looks interesting.

BANKS SCANNER V1.0 CUSTOM 7 5M TOP 7 30M ORB							USD
SYMBOL	5M 8/21	KEY LEVEL	ORB	RETEST	MOMENTUM	STATUS	
TSLA	BULL	PDH ABOVE	BELOW	8 BULL	STRONG	READY	
NVDA	CROSS UP	PML ABOVE	INSIDE	8 BULL	WEAK	BUILDING	
AMZN	BUYERS	ORB L BELOW	BELOW	WAIT	WEAK	NO SETUP	
META	RANGE	PML BELOW	BELOW	21 BEAR	SIDEWAYS	NO SETUP	
GOOGL	RANGE	PML BELOW	BELOW	21 BEAR	SIDEWAYS	NO SETUP	
MSFT	RANGE	PML ABOVE	INSIDE	21 BEAR	SIDEWAYS	NO SETUP	
NOW	RANGE	PWH BELOW	INSIDE	8 BULL	SIDEWAYS	NO SETUP	

Final scanner example: one READY candidate, one BUILDING candidate, and five symbols with NO SETUP.

READ	WHAT THE SCANNER SAW	WHAT YOU DO
TSLA - READY	BULL PDH ABOVE ORB BELOW 8 BULL STRONG	Open TSLA first. The aligned trend, retest, and momentum earned priority. ORB BELOW remains context, not an automatic veto.
NVDA - BUILDING	CROSS UP PML ABOVE INSIDE 8 BULL WEAK	The bullish structure is developing, but momentum is not ready. Watch; do not assume the next candle confirms.
AMZN and others - NO SETUP	BUYERS or RANGE with WAIT/BEAR retests and WEAK/SIDEWAYS momentum	Do not force a trade because one cell is green. The full row is incomplete.

THE LESSON: A clean scanner should not manufacture seven opportunities. Its value is showing you the one chart to inspect - and giving you permission to ignore the rest.

FAQ and troubleshooting

The answers members will need most often.

Can I scan 5M with a 30M ORB?

Yes. Scan Timeframe and Opening Range Length are separate inputs.

Can I scan 15M?

Yes. Select 15M and use a 15-minute TradingView chart.

Can BANKS Bot use another timeframe?

Yes. The Bot reads the 8/21 on whatever chart timeframe is selected. The Scanner itself is limited to 5M or 15M.

Can I show only one symbol?

Yes. Set Rows To Show to 1. All seven are still evaluated; only the highest-ranked row is displayed.

Why did my custom ticker not appear?

Universe is probably still set to MAG 7. Switch to CUSTOM 7.

Why is ORB BUILDING?

The selected 15M or 30M opening range has not finished yet. The Scanner does not pretend the ORB is complete early.

Why did READY change?

The Scanner evaluates confirmed candles. Market structure, retests, and momentum can change as new candles close.

Does READY mean enter?

No. READY means the defined Scanner conditions align. Open the chart, confirm with BANKS Bot, and apply your risk plan.

ALERT SETUP: Enable New READY Alerts in the Scanner first. Then create a TradingView alert using BANKS Scanner - New READY. TradingView alert availability depends on the user's plan.

Your one-page operating checklist

Use this until the workflow becomes automatic.

- The chart timeframe matches the Scanner timeframe.
- The intended Universe is selected: MAG 7 or CUSTOM 7.
- The intended ORB is selected: 15M or 30M.
- READY is ranked first and Rows To Show matches your preferred view.
- You opened the chart before considering an entry.
- You read BANKS Bot in order: CONTROL > LEVEL > TREND > SETUP > MOMENTUM.
- You defined entry, invalidation, size, and reward-to-risk yourself.
- If the setup is late, mixed, ranging, or weak, you are willing to wait.

FINAL RULE: The Scanner is not here to create more trades. It is here to make your attention more selective. The Bot is not here to predict. It is here to translate what the chart confirms now.

Educational use and risk

BANKS Scanner and BANKS Bot are educational chart-analysis tools. They do not provide individualized financial, investment, legal, or tax advice. They do not know your account size, risk tolerance, position size, or financial circumstances. No indicator can guarantee an entry, exit, profit, or protection from loss. Scanner states and historical examples do not guarantee future results. Always define risk before entry and use your own judgment.
